#### OBJECT DESCRIPTION

This candy mold in the shape of an Easter bunny with a basket is composed of two pieces of metal that have been incised from the inside to create the texture of a bunny sitting up and a basket in front of him. These two pieces of metal are mirror images of the other and are held together by separate pieces of metal that clip the long, flat pieces at the ends of the basket together. These flat pieces are scratched up from having the clips removed and replaced.
