#### OBJECT DESCRIPTION

A metal display rack. The rack is made from three pieces of thick metal wire. The pieces are connected in a way that allows the rack to fold into different configurations. The longest piece is bent into a wavy pattern along part of each long end. The short ends are folded at a right angle to the rest of the piece. The next piece is connected to a long piece by a sort of hinge. The third piece is then connected to the second piece by another hinge. The first two pieces have their ends welded together so that they form complete rectangles. The third piece has an open side.

#### ORIGIN

This item was apparently used for display at a candy store. It is unknown what was displayed or which candy store it came from. It is not clear how the rack was configured when displaying items.
